

AMENDMENT

Amendment(s) to the Specification

Please replace the paragraph [0034], beginning at page 11, line 19 with the following amended paragraph:

[0034] Although only the front end of the electronics module guide 20 is shown, the rear end of the electronics module guide 20 may simply terminate with the track 22 or may be configured similarly as the front end with the pin support and stop 24 (same or similar to that shown in FIG. 6). When the rear end of the electronics module guide 20 is configured with the pin support and stop 24, the rack mount system 10 may contain electronics modules that are installed and accessible from either the front or rear side of the rack mount system 10. In other words, the service technician can selectively install and thus access the electronics modules from the front or from the rear of the rack mount system 10. Generally, all the electronics modules of the rack mount system 10 are installed in a similar manner (from front or from rear of the rack mount system) although the electronics modules may be installed from both the front and rear within a given rack mount system 10.
